Description

3/4-year-old seedling.

Delivered in a plastic 3 litre pot.

Height 60/80 cm.

Ø of crown 10/12 mm.

Potted in autumn 2023.

Fagus crenata is a variety of Japanese beech that has smaller leaves with notched sides, unlike its European cousin, *fagus sylvatica*. Its deciduous foliage turns a beautiful orange, red, yellow in autumn and the bark is a decorative grey-white. The pictures show how to turn this seedling into a forest style bonsai.
